1 What is phpGroupWare

The Group-Office is a web-based Group-Office system. It comes with several core functionality, calendar, todo list, address book, file management, and notes.

It also provides a framework for add-on application to integrate seamlessly in the Group-Office. Some examples are bookmark management, trouble ticket system, ... synchronization, phone log, chat room system, and forum system. There is a common development, and you can develop your own as well.

3.2 Tested Systems

On Linux 2.2., 2.4.

PHP 3.0.15+ PHP 4.0.

Apache 1.3.

MySQL 3.22.25 on Windows MySQL 7.0.

Counter-DMA 0.33+ and on qmail 1.03 for MODB3 cc

have none out of it working on Windows NT and OS 2, and using Oracle, the database.

Obtaining and Installing phpGroupWare
